

IN THE SPECIFICATION

Please replace the following paragraphs of the specification. Applicant includes herewith an Attachment for Specification Amendments showing a marked up version of each replacement paragraph.

By The use of a respirator-treatment installation with pattern recognition is possible in particular in the area of CPAP respirator-treatment of a patient (1). With such a respirator-treatment, the timely recognition of a sleep apnea can be promoted by overlaying the volumetric stream produced by the compressed-gas source (4) with a volumetric stream oscillating at low amplitude, produced by a separate pumping installation (14) ~~(P)~~. By evaluating a response signal oscillating at the assigned frequency, one can deduce the respective breathing condition of the patient.
